

PRODUCT INFORMATION

SSA-1R Label Accumulation Cabinet

The SSA-1R Label Accumulation Cabinet keeps a steady flow of labels running to our labelers for continuous product flow.

The SSA-1R Label Accumulation Cabinet is a large capacity, two-reel machine that features an integrated splicing table where splices can be made from reel to reel quickly and easily with no downtime. The SSA-1 features a small footprint and can sit close to the labeling machine. Sleeve Seal accumulation systems are the perfect companion for integration into any of the labeler control panels that monitor production.

PRODUCT DESCRIPTION & SPECIFICATIONS

Access Cabinet

Every Sleeve Seal machine is housed in a heavy gauge stainless steel cabinet and includes lockable service doors for ease of maintenance and safety. Access to the front of the cabinet is managed with Allen Bradley safety interlock switches to ensure safety. Operators are able to manage operation and changeovers using a customized HMI and synchronized adjusters.
